Field Services

- Re-sheaving on geared and gearless elevator machines
- Bearing surface & shaft repair
- Major maintenance service on DC elevator motors
- Rewinding of gearless armatures
- Testing and analysis on AC & DC motors
- Turn down & undercut commutators on gearless motors and MG sets
- Bearing replacement

Our quality in-shop repair services include step-by-step disassembly, detailed inspection, and measurement to identify any electrical and mechanical damage, and rebuild to OEM or customer specs.

All mechanical repairs on shafts, bearings, end bells, etc. are handled by experienced machinists. Motors are then rebuilt using the highest quality wire, insulation, and resin for long-lasting repairs in the most severe environments. Repaired motors are tested for correct electrical and mechanical operation. During these tests, voltage, current, bearing temperature, and vibration are closely monitored and documented.

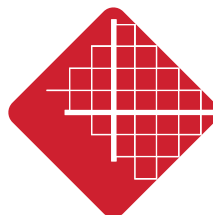

**Repairs can be performed at our facility
or at your site where applicable.**

Bringing *The Power of Uptime™* to You

What is ***The Power of Uptime™***? Simply put, it is our ultimate goal to keep your elevators running at maximum productivity with minimal downtime and cost. Our high-quality, durable, reliable products reduce the risk of downtime and require less maintenance. Our experienced technicians provide preventive and predictive maintenance, and our 24/7 on-call services help efficiently navigate unexpected problems.
